

Summary

Contacting of Continuous Products

The invention pertains to the electrical contacting of a continuously moving metered material web (7), in particular a flexible flat cable, a so-called FFC, during its processing or
5 manufacture.

The invention is characterized in that at least two contacting stations (5, 11; 5', 11') are provided that perform the contacting alternately.

In a first variant there are two, preferably three buffers for the metered material web, and the contacting stations are fixed in place; in a second variant, the contacting stations move during
10 the contacting with the metered material web and then move back without making contact.
